

Lifting work

Derricks and cranes are used for offloading the catch and for loading various materials (nets, cables, etc.) on the quay. In addition, lifting of for example fishing gear is carried out on board (including use of gilson hook, derrick) and on the quay. The hazards of this work can result in physical injury.

Threats

- Getting hit by the load (fishing gear, boxes)
- Swinging gilson hook
- Falling into opening / storage hold
- Release of the load
- Breaking of lifting equipment (slings, hoisting wires)
- Swerving of the lifting equipment (pulley, hook, etc.)
- Pinched limbs

Step 1: Collective measures

- ✓ Make sure that nobody is in the lifting area
- ✓ Ensure periodic inspection and maintenance of equipment
- ✓ Only allow crew with knowledge of hoisting work to do the lifting
- ✓ Check that the load is properly secured before lifting
- ✓ Install a railing if there is a chance of falling into the storage hold
- ✓ Mark the work area with markings (cones, barrier tape, yellow stripes, etc.)

Step 2: Individual measures

- ✓ Make sure that you are at a safe distance from the load
- ✓ Notify bystanders if lifting work is being performed

Step 3: Personal protective equipment

- ✓ Require the use of safety helmets, gloves and safety footwear
